

## Breast Cancer Campaign-Pink October

**Noble Care Foundation** is committed to continuing the meaningful work that helps provide critical improvements in breast cancer through the collective efforts of employees, consumers, and partners in Angola. These efforts include solidarity marathon, seeking partners for common objective, expanding access to medical resources and care, advocating for greater awareness and early detection, developing educational materials. NCF partners with main stream TV channel in the country to cover such activities and sensitizing general public about early detection and care.

We do it every year in Angola, but focus different zones and communities for better coverage of the mission and objective. More than 2,000 people participate in this campaign, including survivors of breast cancer to tell their story to the women in the society for early detection and awareness.
