

Training School Children on Oral Hygiene

Noble Care Foundation trains and teaches school children on basic dental cleaning habits, making it fun and educational exercise. Under the Special Toothpaste program, NCF covers more than 25 schools annually, involving brand ambassadors and known doctors in the field of dental care in Angola.

NCF's focus at the early stage is crucial, as children's teeth are vulnerable to cavities and gum disease, just like adults' teeth. Establishing a strong foundation of oral hygiene from an early age can prevent them from these diseases when they grow.

In all such programs, NCF gives out 'Special Toothpaste' kits to each and every children for them to remember brand 'Special', beside benefits of tooth care.

Teaching kids about the importance of teeth cleaning doesn't have to be a chore. By making it fun and educational, NCF instills good oral hygiene habits that will benefit them throughout their lives.
